

**FEIL long goods frames.
Perfect for your block or
picking storage.**

FEIL long goods frames are especially designed for the storage and transportation of unstable cargoes such as special section tubes, steel bars and sectional aluminium or plastic. The stable framework constructions and the galvanised surfaces ensure excellent stability, durability and weather resistance. In addition, maximum transport security is guaranteed thanks to the infeed channel.

The stackable, craneable and/or nestable models can be combined with optional equipment such as isolation pads for the storage of sensitive goods.

Sizes between 3000 mm and 12000 mm are deliverable as standard. We are happy to manufacture suitable frames, individual models and large quantities for you upon request.
